Smoke Taint Removal

The FIBRAFIX® TX-R filter sheet is a patent-pending method to effectively remove smoke taint from wine and other beverages without damaging the aroma or flavour.

The benefit of using FIBRAFIX® TX-R filter sheets to run tainted wine through into a clean tank is that the filter sheets remove the offending chemical in one simple step.

The active agent in the FIBRAFIX® TX-R filter sheet is an inorganic compound that has already received regulatory approval for treating wine and has been specifically engineered to remove tainted molecules.

Filter Press

Progressive Group Australia supplies both new and reconditioned filter presses at an affordable price.

Shown opposite is the 20cm x 20cm stainless steel filter press.

Ideally suited to smaller scale applications, this press provides an attractive option for wineries, pharmaceuticals and chemical products.
