### Filter Bags

In addition to our extensive range of Lenticular and Membrane filtration, Progressive Group also offers a wide range of bag filtration.

Bags are ideal for many applications as they offer high through-put, long life and multiple use.

The bags are made from Polypropylene or Nylon Monofilament and supported by a steel or polypropylene ring at the top. Having the ability to be able to be washed out and re-used, this makes bags a very cost effective option.

Bags are used in many diverse applications including paint, oil, wine, water etc. Their application is suited to rough filtering up to 1000 micron or fine filtering, down to 0.5 micron. So, whatever your application, consider a bag filter as a pre-filter.

### How to properly install a membrane cartridge

We have noticed that there have been comments regarding the correct installation of 226 / code 7 Membranes. Many installers are forgetting to wet the 'O' rings on the bottom.

These just need to be moistened in a small pool of water, prior to installation. More importantly, when handling the cartridge, it is good practice to hold them at the base of the cartridge with one hand and steady the top with the other.

When twisting the cartridge into the housing, make sure you do it at the base of the cartridge and not with the top of the cartridge.

The problem with twisting from the top is that it could possibly break the cartridge.

### Credit Card Payments

Progressive Group is happy to announce that we now offer the convenience of Credit Card payment.

We accept Visa, Mastercard.

Please enquire about making a Credit Card payment with your next purchase.

Offering the latest in filtration & Reverse Osmosis technologies

Head Office: 17 Redland Drive, (P.O Box 246) Mitcham Vic, 3132
