

# MARKET LEADERS IN FILTRATION

## RONA™ SAND TANK SYSTEM

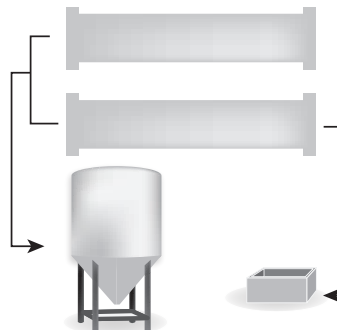

PRE - FILTERS

Progressive Group's range of Sand bed filters offer excellent depth filtration.

Progressive's range of sand filter offer excellent particulate retention efficiency for "dirty" water. With particles travelling through a torturous route and a large surface area, Progressive's sand filters have they provide excellent service life between flushes.

Progressive's sand filtration systems are able to be regenerated automatically ensuring low maintenance and minimal cost.

# CARBON TANK

## RONA™

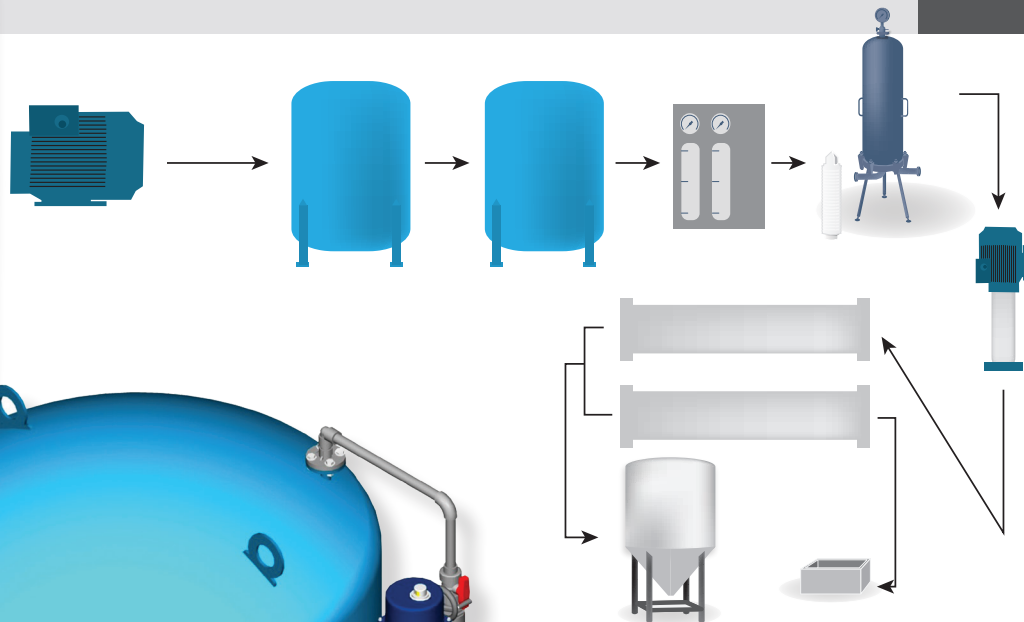

## SYSTEM

PRE - FILTERS

Progressive Group's range of activated Carbon bed filters offer excellent odour and colour removal.

AUTO CARBON FILTER

AUTO ACTIVE CARBON FILTER

Carbon offers excellent surface area for odour and colour absorption, activated carbon has a surface area of over 500 m<sup>2</sup>/gram. Carbon is also effective at removing chemicals such as chlorine, other elements such as sediment and volatile organic compounds can also be effectively removed. Progressive Group also offer customized carbon which enables better absorption of certain elements versus other elements that may be favourable to production.

Progressive Group's carbon filtration systems can also self-flush ensuring that the carbon bed system operates to its full potential.
